

# Summary

1 minute

Azure supports a range of database services that you can use to support new cloud applications or migrate existing applications to the cloud.

In this module, you learned how to:

- Identify options for Azure SQL services
- Identify options for open-source databases in Azure
- Provision a database service on Azure

## Next steps

Now that you've learned about Azure relational database services, consider learning more about data-related workloads on Azure by pursuing a Microsoft certification in [Azure Data Fundamentals](#).
